## Dr. Tara A. Schwetz

Acting Principal Deputy Director National Institutes of Health 9000 Rockville Pike Bethesda, MD 20892

RE: National Institutes of Health Office of the Director Request for Information on Reenvisioning U.S. Postdoctoral Research Training and Career Progression within the omedical Research Enterprise

The American Society for Biochemistry and Molecular Biology is an international nonprofit scientific and educational organization that represents more than 11,000 students, researchers, educators and industry professionals. The ASBMB strongly advocates for strengthening the science, technology, engineering and mathematics workforce, supporting sust**eifund**ing for the American research enterprise and ensuring diversity, equity and inclusion in STEM.

The ASBMB is heavily invested in offering services and professideraelopment programmintg students and earlyareer research pr(n)-4 (d)-4 (e)1 (es)-5 (ea-5 (ea-6 (c)d)-3.9n)-4 (g)a-225.9n 004 2c 0 -

Lastly, postdoctoral positions are temporary positions for Ph.D. holders to obtain daraeaslemia, industry and other sectors. Howeydere value opursuing a postdoc for nonacademic careers is not well quantified. Data should be collected and disseminated detailingatheroutcomes opraduate students and postdos (salary and position level) acroads sectors reporting the degree to which postdoc positions contribute to career progression in nonacademic sectors stata would help recruited retain postdocs who sectonacademic careers.

Fundamental issues and challenges inhibiting recruitment, retentioned overall quality of life of postdoctoral researchers in academic research

Postdocs experience significant challening to day's academic environment, including salaries below the living wage, unclear expectations and timelines for postdoctoral research, and inequitable support from institutions. Mitigating a few of these challenges would go a long way in increasing recruitment, retention and quality of life for postdoctoral researchers

First, the inherent temporality of the positions often means postdocs are derpaid and lack necessary benefits such as health insurance, child cace ess and funds etirement plansetc, which are essential for long-term financial health. To recruit and ore importantly, retain postdocs, these barriers must be removed It's vital for postdocs to have access to employee benefits that upport and build financial stability.

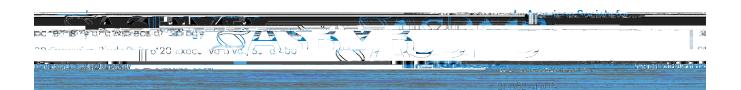

Second, a segremic issue inhibiting postdoctoral recruitment and retention is the "trickle 'definenct caused by the stifling competition and lack ork-life balance in academic environments. Graduate students and postdocs observe their activised peers struggling abecome increasingly unwilling to pay the opportunity cost required to secure faculty positions that are outrageously competibilities and few perks in comparison to the challenges

Third, postdos often feelsolated They are neither studenstaffersnor facultymembersand lack visibility in institutions and society. Additionally, postdocs often leave behind their support systems when relocating for positions, worsening mental lhealtdwork–life balance and miting the participation of historically marginalized groupsh NH should require postdoctoral offices at institutions and consider strategies to fund them

Lastly, postdoc recruitment should become more comprehensive and transparent to increase the overall quality of the research enterprise and ensure inclusion. Recruiting postdocs is a challenging effort for many investigators; it relies heavily on networking, often disadvantaging students at desourced institutions The NIH should incentivize and provide tools to conduct laggedoc recruitment events that are equitable and accessible to all.

Existing NIH policies, programs or resources that could be modified, expanded or improved to enhance the postdoctoral training ecosystem and academic research career pathways

While the NIH offes multiple resources that enhance postdoctoral training, the ASBMB recommends NIH play a more active role in setting policies that benefit postdocs, encourage institutions to cultivate positive work environments, and expand programs that retain postdocs in academia.

Lastly, the <u>National Postdoctoral Associa</u>thas a wealth of tools, knowledge and advice to help postdocs succeed. The ASBMB recommends the support and disseminate these resources to the broader scientific community when appropriate.
